

CHEAT SHEET: 5 Ways to Explain the iTOVi Scanner

1. The Natural-Products-Focused Approach

- Each essential oil product comes from a natural substance—the flowers, leaves, roots, or seeds of a distinct plant species.
- As a result, every natural wellness product is chemically, electrically, and energetically distinct!
- The iTOVi Scanner precisely imitates the distinct electrical signatures of these products, sending them to the body one by one and recording the body's natural response to each one.
- The strongest of these responses make up the contents of your personalized scan report.

2. The Skin-Focused Approach

- Your skin is closely connected to the conscious, unconscious, physical, and emotional functions of your body.
- Whenever your body experiences a significant internal change (stress levels, energy levels, temperature, medication, mood, etc) your skin reacts almost instantly.
- The iTOVi Scanner introduces your body to the energetic signature of a wellness product and then measures your body's reaction to that product through your skin. It repeats this test with the signature of each product you are scanning for.
- The strongest of these reactions make up the contents of your personalized scan report.

3. The Technology-Focused Approach

- GSR is an amazing technology with many applications.
- It shows a quantified measure of a individual person's bodily reaction (as effected by conscious, unconscious, emotional, and physical factors) to a stimulus.
- Which means your results are likely to be quite different from someone else's.
- The iTOVi Scanner presents a wellness product's specific frequency as a stimulus to your body and then measures your body's reaction. It repeats this test with the frequency of each product you are scanning for.
- Your strongest-response products appear in your personalized scan report.

4. The Electricity-Focused Approach

- The human body can conduct, inhibit, and generate electricity.
- It uses electrical impulses for many vital functions, using them to enable communication between all your organs, muscles, and tissues.
- The iTOVi Scanner taps into this system to test your body's responsiveness to different wellness products.
- The iTOVi Scanner uses electrical impulses to present to the body the precise signature of a specific wellness product and then measures your body's electrical response.
- It repeats this test with the frequencies of all the wellness products you want to scan for.
- Your strongest-response products appear in your personalized scan report.

5. The Comparison Approach

- The iTOVi Scanner combines two powerful technological approaches.
- Like NuroKor, vagus nerve stimulators, or Dolphin Pro, the iTOVi Scanner sends precise, subtle, but impactful electrical impulses to the body.
- And like the Microsoft Band, FitBit, and Jawbone Up, the iTOVi Scanner uses GSR technology to collect live, individualized wellness data from the body.
- This allows the iTOVi to test your body for its personalized response to specific wellness products.
- Your strongest-response products appear in your personalized scan report, providing great insight into your wellness AND knowledge of how best to use your wellness products.
